

Eyelash Extension Aftercare

Next 48 Hours

Avoid being completely immersed in water, steam and/or saunas.

Eyelash Wand

Your eyelash wand is your new best friend. Keep it clean and be sure to use it daily or every time your lashes have been disturbed i.e. sleep, shower etc. Gently comb your lashes.

"Touche pas!"

It's simple. Do not touch your eyelash extensions. Your fingers secrete oils. Picking, rubbing, pulling, bending or anything similar is just bad news for your eyelash extensions and could also cause permanent damage to your natural lashes!

100% Dry for 24 Hours

It is good practice to take your shower, shampoo and condition your hair prior to your eyelash extension appointment. Once your eyelash extensions have been completed by your technician, you want to keep them as dry as possible. Getting them wet or damp will only compromise the retention.

Makeup

- All makeup must be oil free; mineral makeup is a great option.
- Avoid using natural lash mascara.
- Be sure to carefully remove your makeup every night.
- Oil free makeup wipes are a great option, as they are often non-woven and allow you to detail around your eyes with your finger tip.
- Do not use an eyelash curler.

Lash Maintenance

Your natural lashes have a cycle of approximately 60 to 90 days. That means, they naturally grow and fall out almost every 2-3 months. A mindful and licensed technician knows to only apply eyelashes extensions to mature lashes (30 days old at least).

To keep your eyelash extensions full and attractive, this is why your technician recommends a fill at least every 3 to 4 weeks. Lash addicts are in every 2 weeks!
